DETAILED ACTION

Response to Amendment

1. The Title as amended by Applicant is descriptive of the claimed invention. The objection outlined in the previous action is thus rendered moot and is withdrawn by the Examiner.

Allowable Subject Matter

2. Claims 1-11 are allowed.
3. The following is an examiner's statement of reasons for allowance: The amended inclusion of the limitations which limit the illumination control device to activating only one or the other of the illumination devices in response to certain conditions (e.g. a single shot or continuous mode as in Claim 1 or the relationship of the shutter speed with the flash synchronization speed as in Claim 4) serves to completely rule out reasonably interpreting that a camera system which always triggers both flashes will meet the claimed limitations.
4. With particular regard to claim 1 and claims dependent thereupon: The prior art of record do not teach nor render obvious the selection between a discharge control type first illuminating device and a current controlled second illuminating device based on the photographing mode being a single-shot photographing mode or a continuous photographing mode. The prior art of record is not configured to only provide illumination from one or the other of a discharge or current-controlled illumination device. Kishimoto as shown in the operational flow charts of Figures 11 and 19 will

always trigger the discharge-type illumination device (step #38). Examiner further wishes to note the reference JP2005-107240 A (Kyocera), cited by the international search report provided in the IDS dated 08/11/2006. While Kyocera does items of interest with both a LED and discharge illumination device, unlike the claimed invention Kyocera triggers both the discharge and current controlled illumination devices in the single-shot photographing mode (see paragraph [0049]). Finally, Kyocera is not available as prior art as it was published after the effective US Filing Date of 02/09/2005.

5. With regard to claim 4 and claims dependent thereupon: The prior art of record does not teach nor render obvious the limitation of the selection between a current controlled and discharge type illumination device based upon the relationship between the shutter speed and the first (discharge-type) illumination device synchronization speed. Matsui et al (US PGPub 2005/0265014 A1), for example, shows in Figure 8 the syncing of *both* discharge and current-based illumination devices to the shutter.

6. In relation to both claims 1 and 4, the use of current controlled and discharge controlled illumination devices in cameras is known in the art, see for example Voss et al (US PGPub 2005/0157205 A1) or Ikari et al (2004/0008274 A1). However, the prior art cameras use the two illumination devices in a distinctly different manner than is claimed in the instant application. In the prior art, the current controlled illumination device is used to provide subject illumination for motion picture capture while the discharge based illumination device is configured to provide illumination for still image capture (see Voss, paragraph [0004], and Ikari, paragraphs [0045-0046] and [0055]).

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
